# Samsung Prism Objective 2:

## Agenda for this objective:

1. To finalise the dataset upto the final bit and confirm all the features
2. Work on the static algorithm(formula) for the generation of data for each specific features
3. Design the pseudocode for the machine learning implementation of the dataset,
4. Make a literary survey of all the research done in the process,

## Checkpoint 1: (Till friday)

1. Understanding of all the features(Do a correlation between all the features and how they can be connected to the output) ----> LATENCY & REALIABILITY
2. Advocacy for the supervised learning
3. Static formulation study and implementation - 2-3

## Checkpoint 2: (Till Friday)

1. Representation of all the research regarding static formulation
2. Working on the presentation for the meeting with mentors - Monday
3. Finalising of the algorithm(1st level)
